

STATISTICS UPDATE: CONSUMER PRICE INDEX

JUNE QUARTER 2011 HIGHLIGHTS

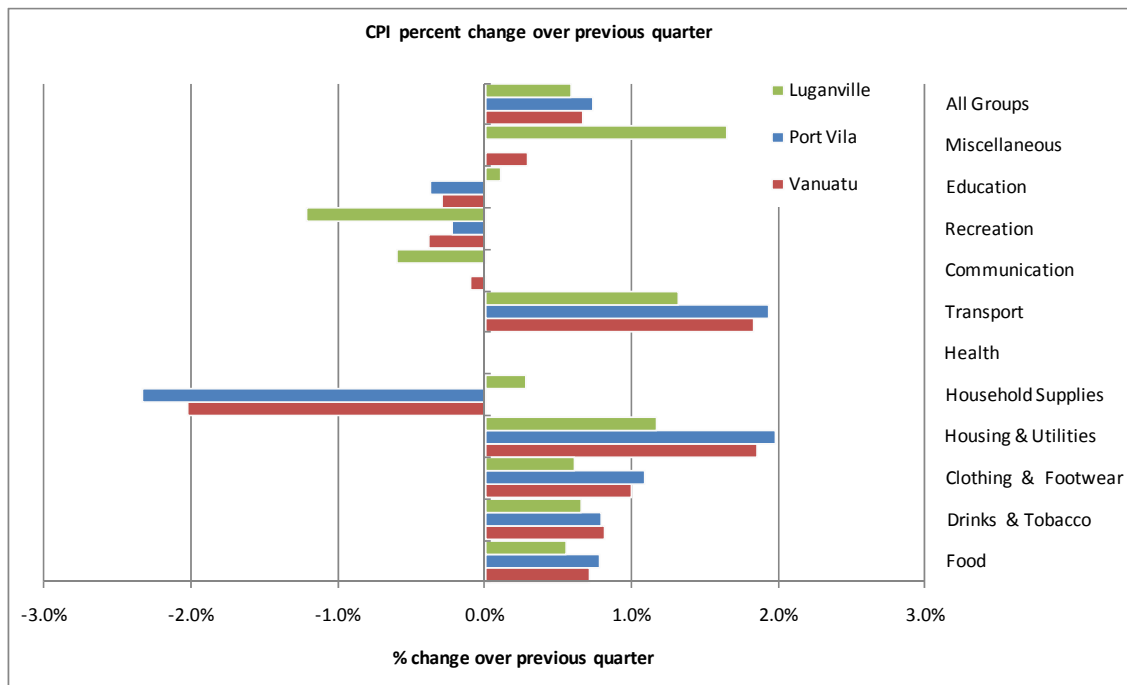

Figure 1: CPI percent change over previous quarter

CPI QUARTERLY MOVEMENT

The Consumer Price Index (CPI) slightly increased by 0.7% in the June quarter of 2011, compared with a decrease of 0.4% in the previous quarter. Port Vila and Luganville indices slightly rose by 0.7% and 0.6% respectively. At the national level, the following expenditure groups contributed to the increase in the CPI: housing and utilities group (+1.9%); transport (+1.8%); clothing and footwear (+1.0%). The main contributors to the movement were the rise in cooking gas, rents of house/flat and automotive fuel. Slight increases were also shown for the alcoholic drinks and tobacco (+0.8); and food (+0.6%) groups. Expenditure groups reflecting a decline in prices include household supplies (-2.0%), recreation (-0.4%), education (-0.3%) and communication (-0.1%). This decrease was due to price reduction in furniture, housing appliance, audio, visual and computing and mobile phones.

CPI ANNUAL MOVEMENT

When compared to the same quarter of 2010, the Vanuatu index increased by 0.6%, with 0.7% for Port Vila Index and 0.6% for Luganville. The expenditure groups contributing to the increase over the June quarter of 2010 were education (+3.1%), transport (+2.7%), housing and utilities (+1.5%), alcoholic drinks and tobacco (+0.8%), clothing and footwear (0.8%), health (+0.2%) and food (+0.1%). The increase in education and transport was the result of the increase in school fees for private primary and secondary schools and fuel (petrol and diesel) charges per litre. Household supplies (-1.9%) and recreation (-0.3%) groups recorded the only offsetting fall.

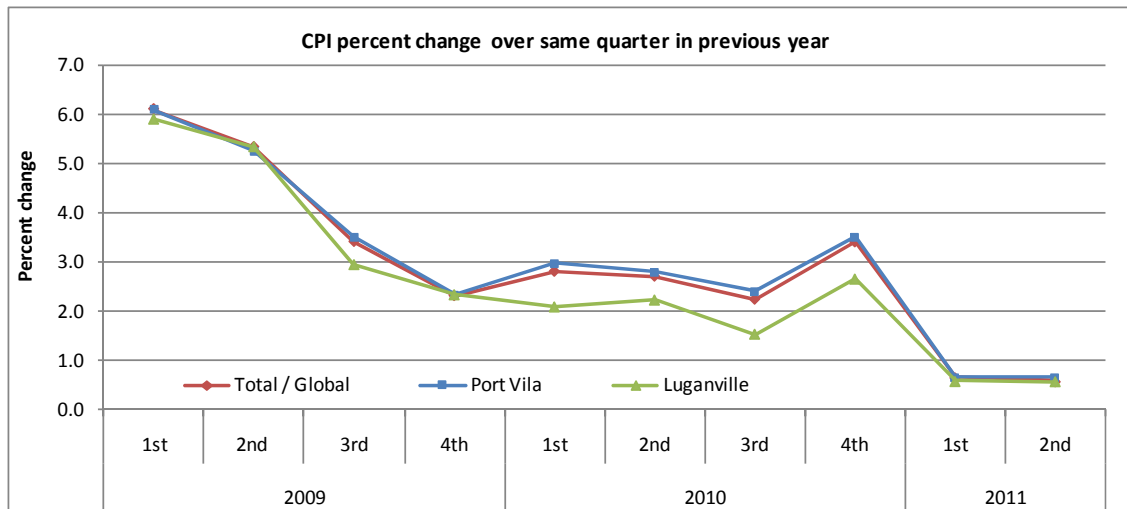

Figure 2: CPI percent change over same quarter in previous year

UNDERLYING INFLATION

'Underlying inflation' is a measure derived from the CPI excluding items which typically have unstable or volatile prices; because of things like seasonal variation or policy decisions. Underlying inflation decreased by 0.2% in June quarter of 2011 compared to the previous quarter (March 2011). However, it recorded an increase of 0.4% over the same quarter of 2010.

CONCEPTS AND DEFINITIONS

The Consumer Price Index (CPI) is used to measure the changes in the prices of goods and services purchased by households in Port Vila and Luganville over a period of time. The separate indices for these two major commercial centres are then combined to create the Vanuatu CPI.

This change in prices is sometimes called inflation. Retail stores, supermarkets, liquor outlets, transport operators, service stations and other providers of goods and services help supply the Vanuatu National Statistics Office with the information to calculate the CPI.

Prices are collected for exactly the same goods and services each quarter. This ensures that changes in the cost of goods and services over time are not due to changes in the quantity or quality of the goods and services purchased.
