STATISTICS UPDATE: CONSUMER PRICE INDEX

SEPTEMBER QUARTER 2016 HIGHLIGHTS

Figure 1: CPI per cent change over previous quarter

CPI QUARTERLY MOVEMENT

The Consumer Price Index (CPI) of September 2016 indicated a slight increase of (+0.9 %). Port Vila dramatically increased by (+1.2%), while Luganvillie index decreased by (-0.5%) compared to the previous quarter. The only expenditure group that contributed to the increase in the CPI were Food (+2.3%), Transport (+0.6%), Housing Utilities (+0.2%), and Miscellaneous (+0.1%), however, Clothing and Footwear contributed a decrease of (-0.6%), Drinks and Tobacco, and Communication (-0.1%) respectively. Other expenditure groups: Household Supplies, Health, Recreation and Education all remained stable with (0.0%) respectively. The main contributor in prices was due to the increases in price movements of Fruits and Vegetables in Port Vila, international airfares and purchasing of new motor vehicles in both regions, renting in Port Vila and Personal accessories and Toiletries in Luganvillie. However, the sub group that showed negative impact on the price movements were: woman’s clothing and business shoes in both regions, wines and spirits and purchasing of mobile phones in Luganvillie.

CPI ANNUAL MOVEMENT

When compared to the September quarter of 2015, the Vanuatu index increased by (+1.9%), both region increase, Port Vila index (+2.2%) and Luganville index (+1.1%). At national level, the expenditure groups that contributed to the increase over the same quarter of last year were: Food (+5.7%), Education (+4.7%), and Transport (+3.1). Thus, the increases in these expenditure groups were the result of increases in price movements of Fruits and Vegetables, school fees, and purchasing of new motor vehicle. However, the other groups that shows negative impact were Clothing and Footwear (-3.6%), Housing Utilities (-2.8%), Miscellaneous (-0.9%), Communication (-0.6%), Health and Drinks and tobacco at (-0.1%) respectively.

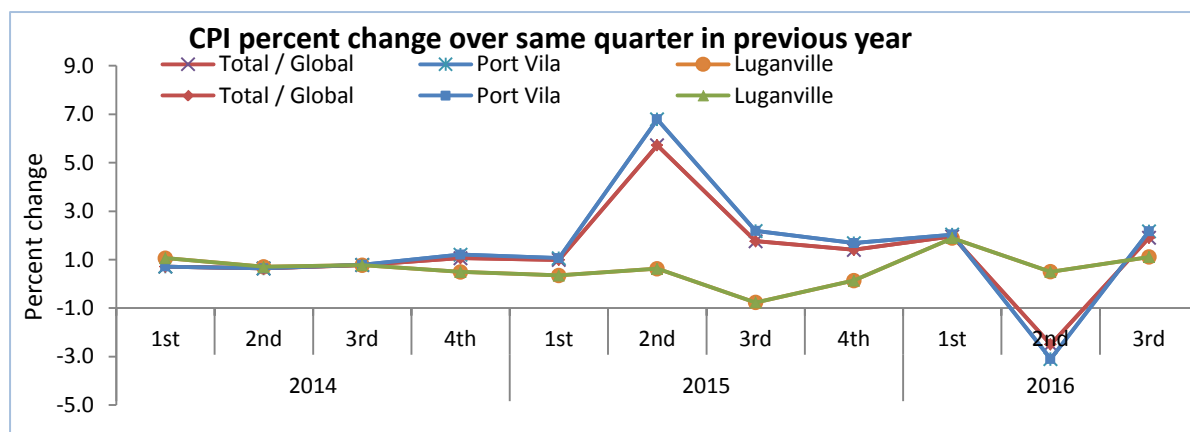

Figure 2: CPI per cent change over same quarter in previous year

UNDERLYING INFLATION

'Underlying inflation' is a measure derived from the CPI excluding items which typically have unstable or volatile prices; because of things like seasonal variation or policy decisions. Underlying inflation decrease by (-0.2 %) in September quarter of 2016 compared to the previous quarter June 2016. In addition, it recorded an increase of (+1.4 %) over the same quarter of 2015.

CONCEPTS AND DEFINITIONS

The Consumer Price Index (CPI) is used to measure the changes in the prices of goods and services purchased by households in Port Vila and Luganville over a period of time. The separate indices for these two major commercial centres are then combined to create the Vanuatu CPI.

This change in prices is sometimes called inflation. Retail stores, supermarkets, liquor outlets, transport operators, service stations and other providers of goods and services help supply the Vanuatu National Statistics Office with the information to calculate the CPI. Prices are collected for exactly the same goods and services each quarter. This ensures that changes in the cost of goods and services over time are not due to changes in the quantity or quality of the goods and services purchased.
