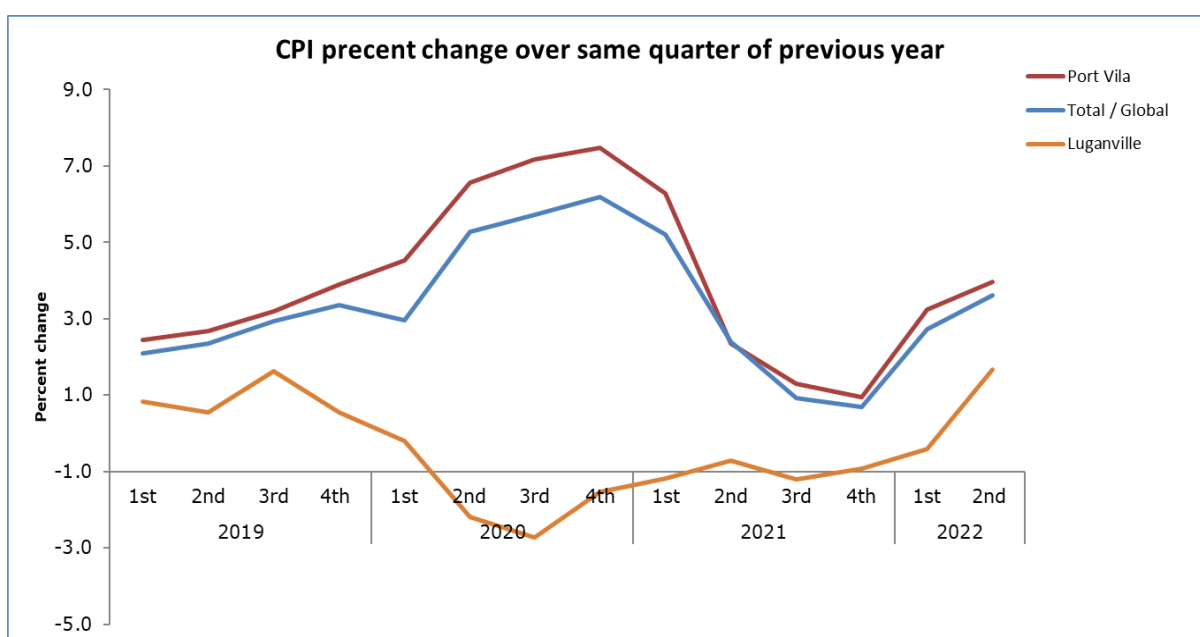

Figure 2: CPI per cent change over same quarter in previous year

‘Underlying inflation’ is a measure derived from the CPI excluding items which typically have unstable or volatile prices; because of things like seasonal variation or policy decisions. In March quarter of 2022 underlying inflation increased by (+0.1%) over the previous quarter and increased by (+0.1%) over the same quarter of 2021.

## CONCEPTS AND DEFINITIONS

The Consumer Price Index (CPI) is used to measure the changes in the prices of goods and services purchased by households in Port Vila and Luganville over a period of time. The separate indices for these two major commercial centers are then combined to create the Vanuatu CPI.

This change in prices is sometimes called inflation. Retail stores, supermarkets, liquor outlets, transport operators, service stations and other providers of goods and services help supply the Vanuatu National Statistics Office with the information to calculate the CPI. Prices are collected for exactly the same goods and services each quarter. This ensures that changes in the cost of goods and services over time are not due to changes in the quantity or quality of the goods and services purchased.
